빅데이터 분석 및 응용

L01.1: GCP & DFS Practice

Summer 2020 Kookmin University

Contents

- Google Cloud Platform
- Create a Hadoop Cluster
- Setup your cluster
- Upload files to the master node
- Upload files to HDFS

- A suite of cloud computing services
- Cloud Dataproc: Big data platform for running
 Apache Hadoop and Apache Spark jobs.
- Free 300\$ credit for first 12 months.
- https://cloud.google.com

Google Cloud

Google을 선택해야 하는 이유 솔루션 제품 가격 책정

영업팀에 문의

무료로 시작하기

차세대 제품 개발 더 나은 소프트웨어로 더욱 빠르게

- Google의 핵심 인프라, 데이터 분석, 머신러닝을 사용하세요.
- 모든 기업에 적합한 보안과 완벽한 기능을 제공합니다.
- 오픈소스 및 업계 최고 수준의 가격 대비 성능을 제공하기 위해 최선을 다하고 있습니다.

Contents

- Google Cloud Platform
- Create a Hadoop Cluster
- Setup your cluster
- Upload files to the master node
- Upload files to HDFS

마스터 노드

YARN Resource Manager, HDFS NameNode 및 모든 작업 드라이버를 포함합니다.

머신 구성

※ CPU 플랫폼 및 GPU

작업자 노드

각각 YARN NodeManager 및 HDFS DataNode를 포함합니다. HDFS 복제 인수는 2입니다.

머신 구성

Adding Firewall rules

Adding Firewall rules

Adding Firewall rules

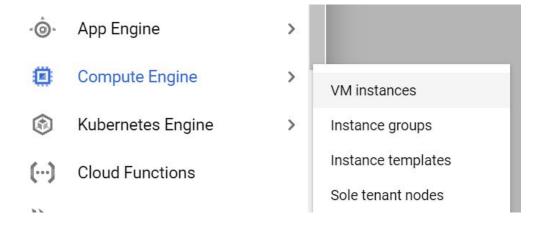

방화벽 규칙은 인스턴스로 수신 또는 발신되는 트래픽을 제어합니다. 기본적으로 네트워크 외부

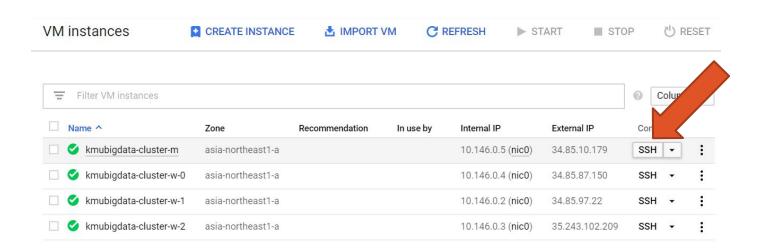

Get your current ip addr. here: https://www.whatismyip.com/

- Setting up the master node to log in by password.
 - Step 1. modify a configuration file of the master node
 - Step 2. change your password

Side-menu > Compute Engine > VM instances

Select "SSH" button of the master node

- Edit /etc/ssh/sshd_config file
 - Open the file using a text editor (e.g. nano, vi, ...)

 - uncomment "Port 22" and add "Port 2222"
 - Save (Ctrl + X □ y □ Enter on nano, esc □ ":wq" on vi)

```
The programs included with the Debian GNU/Linux system are free software; the exact distribution terms for each program are described in the individual files in /usr/share/doc/*/copyright.

hmpark@kmubigdata-cluster-m:~$ sudo nano /etc/ssh/sshd_config

hmpark@kmubigdata-cluster-m:~$ sudo service ssh re

reload restart

hmpark@kmubigdata-cluster-m:~$ sudo service ssh restart
```

- Change password
 - sudo passwd <your-id>
 - Enter new password

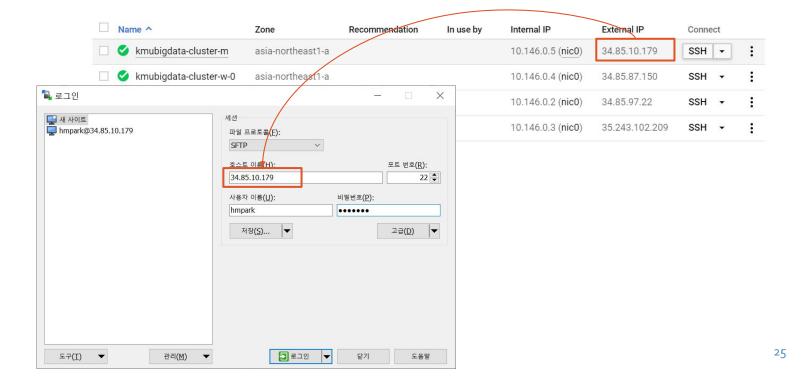

```
hmpark kmubigdata-cluster-m:~$ sudo passwd hmpark
Enter new UNIX password:
Retype new UNIX password:
passwd: password updated successfully
hmpark@kmubigdata-cluster-m:~$
```

Contents

- Google Cloud Platform
- Create a Hadoop Cluster
- Setup your cluster
- Upload files to the master node
- Upload files to HDFS

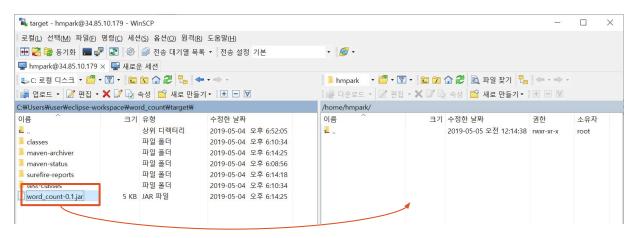

Upload files to the master

- On Windows 10
 - Download and install WinSCP from https://winscp.net/eng/download.php
 - Run WinSCP and set up the connection to the master

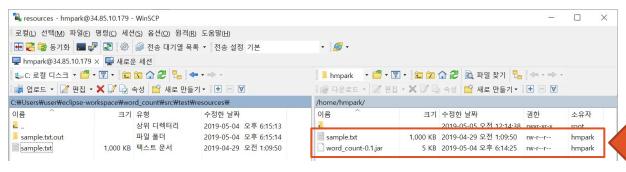

Upload files to the master

- On Windows 10
 - Move files to the master (a jar file, and a text file)

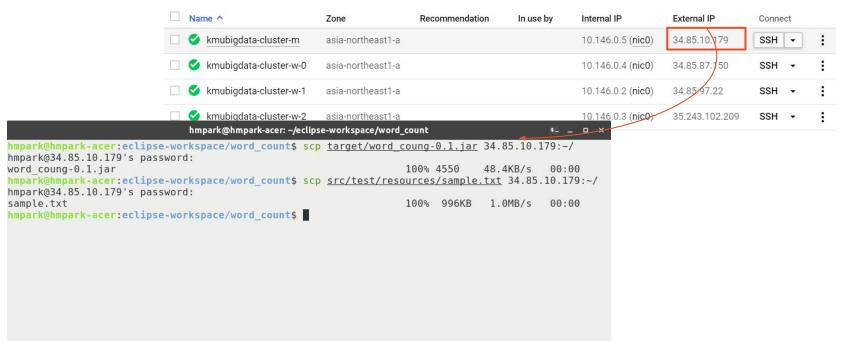

Drag-and-drop

Like this

Upload files to the master

- On Linux (Ubuntu)
 - Use "scp" command (secure copy)
 - scp [local file path] [remote ip]:[remote directory path]

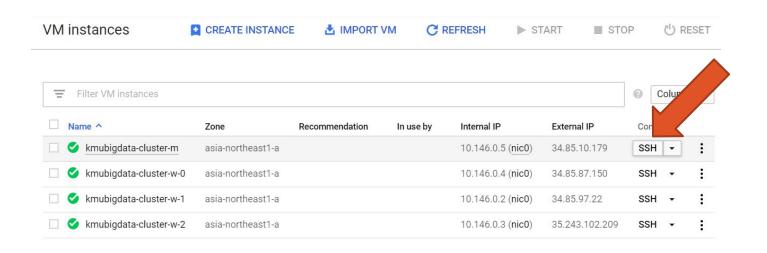

Contents

- Google Cloud Platform
- Create a Hadoop Cluster
- Setup your cluster
- Upload files to the master node
- Upload files to HDFS

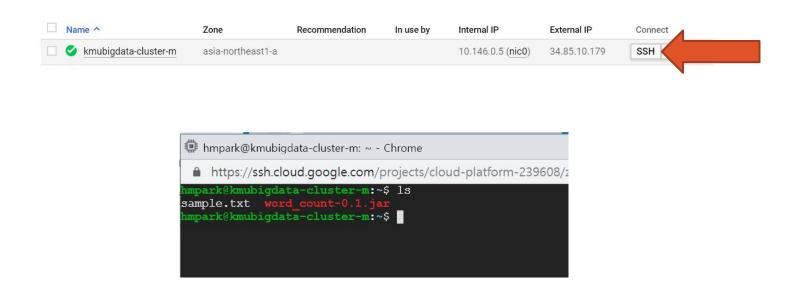

Upload files to HDFS

Connect the master via SSH

Upload files to HDFS

- Connect the master via SSH
- Use "Is" command to check the list of files in the current directory

Upload files to HDFS

- Push the text file to HDFS
 - hdfs dfs -put [local file path] [hdfs file path]
 - To uploads the file at [local file path] to [hdfs file path] in HDFS
 - hdfs dfs -ls [hdfs directory path]
 - To check the list of files in [hdfs directory path]

```
